

Diebold Nixdorf CEO Gerrard Schmid to Deliver Keynote Speech at the RBR Branch Transformation Conference 2019

November 14, 2019

Keynote address focuses on how customers are better utilizing self-service in the branch – or as the branch

LONDON and NORTH CANTON, Ohio -- Gerrard Schmid, president and chief executive officer of Diebold Nixdorf (NYSE: DBD), will deliver a keynote speech at the [RBR Branch Transformation 2019](#) conference on rethinking how financial institutions approach the ATM's place in the digital transformation process. He will discuss how customers are better utilizing self-service in the branch – or as the branch – through the integration of technology that improves the consumer experience, optimizes business operations and connects real-time data.

As a global leader in driving connected commerce for the banking and retail industries, the company will also showcase its latest self-service solutions at the conference, which is taking place from 19-20 November at the Park Plaza Riverbank Hotel in London. The event attracts more than 550 pioneering banks and industry partners from over 50 countries worldwide.

Visitors to the Diebold Nixdorf booth will have the opportunity to engage with experts and learn more about the company's expertise in end-to-end branch transformation. The focus will be on three core areas: enabling seamless journeys for consumers, businesses and staff; the innovative capabilities of the [DN Series™ solutions](#) and managing availability with connected services.

- A successful digital transformation requires the understanding and accommodation of seamless journeys for all parties involved. The [DN Vynamic™ software suite](#) provides a personalized user experience and customized marketing options to enhance operations across any channel – putting consumer preferences at the heart of the experience.
- Intelligently designed to reduce its environmental impact, the new DN Series can save energy and costs for a branch by enabling a more efficient maintenance process and reducing the carbon footprint of daily operations. From material selection and longevity of components, to energy efficiency and recyclable disposal, the DN Series was built with sustainability in mind.
- With built-in cash recycling capabilities, larger note capacities and more intelligent cash management processes, the DN Series delivers increased performance and an optimized total cost of ownership. By utilizing the cash recycling capabilities, the ATM can securely and accurately accept, validate, store and recirculate cash, which increases efficiency and reduces the frequency that cash-in-transit companies are needed to refill machines.
- Through digital connectivity, data can be harnessed to drive real insights and real results. Powered by [Diebold Nixdorf AllConnect Services™](#), ATM as a Service is a tailor-made solution that optimizes self-service fleets, while [AllConnect Data Engine](#) uses real-time aggregation for smarter service and maintenance. With end-to-end management and remote-resolution capability, [Vynamic™ View](#) provides proactive monitoring for any sized fleet.

Together, these offerings enable banks and retailers to make physical channels agile, efficient and differentiated with digital capabilities.
